

REEYANSH BAJRACHARYA

Software Engineer

0411 485 228 • bajracharyareeyansh@gmail.com • [LinkedIn](#) • [GitHub](#) • Sydney, NSW

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building full-stack applications, distributed systems, and data-driven solutions. Proficient in JavaScript, Python, and React, with practical experience designing scalable systems, integrating APIs, and handling real-world constraints such as rate limits and system reliability. Proven ability to translate business requirements into technical solutions and deliver end-to-end projects across the software development lifecycle.

TECHNICAL SKILLS

Languages: Python, JavaScript, C#, SQL

Frameworks & Libraries: React, Tailwind CSS, Recharts, REST APIs

Tools & Platforms: Docker, RabbitMQ, Git, GitHub, Vite

Core Concepts: Data Structures & Algorithms, OOP, Distributed Systems, Relational Databases, System Design, SDLC

PROFESSIONAL EXPERIENCE

Subject Matter Expert – Digital Solutions Pro | Regal Pavilion

Jul 2024 – Jan 2025

- Translated business requirements into clear technical specifications and collaborated with developers to ensure correct implementation.
- Evaluated and selected software platforms through structured analysis, leading to the adoption of iVvy.
- Supported system integration and troubleshooting, identifying issues and coordinating fixes across technical teams.
- Improved operational workflows by aligning system capabilities with business needs.

PROJECTS

Stock-Sense – Market Analytics Dashboard

React · JavaScript · REST APIs · Tailwind CSS

- Built a responsive multi-page stock dashboard with real-time market data and client-side routing.
- Integrated external APIs with robust error handling and rate-limit management to ensure stable performance.
- Implemented portfolio tracking with position management and real-time gain/loss calculations.
- Designed clean, user-focused UI with reusable components and efficient state management.

AI Resume Critiquer – Web Application

Python · Streamlit · OpenAI API

- Developed an AI-powered resume analysis tool that generates structured, role-specific feedback.
- Implemented PDF and text parsing for dynamic content extraction from uploaded documents.
- Designed prompt logic to evaluate clarity, skills alignment, and experience impact.
- Integrated OpenAI API with error handling and formatted outputs for a consistent user experience.

Distributed Trading & Contact Tracing Systems

Python · Docker · RabbitMQ

- Built distributed, message-driven systems using queue-based architecture.
- Implemented asynchronous communication between services for scalability and fault tolerance.
- Containerised services using Docker for consistent, reproducible deployment.
- Validated system behaviour end-to-end to ensure reliability under load.

Game World Database System

MySQL · SQL

- Designed and implemented a normalised relational database schema for a game world domain.
- Developed complex SQL queries including joins, aggregations, and updates.
- Enforced data integrity using primary and foreign key constraints.

EDUCATION

Bachelor of Software Engineering (Artificial Intelligence)

Torrens University, Australia
