REEYANSH BAJRACHARYA

Graduate Software Engineer

0411 485 228 | bajracharyareeyansh@gmail.com | linkedin.com/in/reeyanshbajracharya | github.com/reeyansh404 | Campsie, NSW

PROFESSIONAL SUMMARY

Final-year Software Engineering (AI) student at Torrens University, graduating 2026. Experienced in building full-stack web applications, distributed systems, and relational databases across the full software development lifecycle. Proficient in Python, JavaScript, C#, React, Docker, and SQL, with a strong foundation in OOP, algorithms, and data structures. Collaborative team player with strong communication skills, eager to contribute to real-world engineering projects and grow within a professional software team.

TECHNICAL SKILLS

Languages:	Python, JavaScript, C#, HTML, CSS, SQL
Frameworks:	React, React Router, Recharts, Tailwind CSS, REST APIs
Tools:	Docker, RabbitMQ, Git, GitHub, Visual Studio Code, Vite
Concepts:	OOP, Algorithms & Data Structures, Distributed Systems, Relational Databases, Full-Stack Development, SDLC, UML
Soft Skills:	Problem Solving, Team Collaboration, Communication, Adaptability, Attention to Detail

CERTIFICATIONS

Technology Job Simulation — Coding & Development | Deloitte (via Forage) *Feb – Mar 2026*

EDUCATION

Bachelor of Software Engineering (Artificial Intelligence) | Torrens University, Australia *Expected Aug 2026*

PROFESSIONAL EXPERIENCE

Subject Matter Expert – Digital Solutions | Pro Regal Pavilion *Jul 2024 – Jan 2025*

- Translated CEO requirements into clear specifications for the development team and validated software releases against expected outcomes.
- Researched and evaluated software platforms, coordinating vendor demos and stakeholder meetings to confirm system fit — applied structured, data-driven analysis to select iVvy.
- Supported system integration and troubleshot issues across internal tools, demonstrating strong technical communication and problem-solving skills.

TECHNICAL PROJECTS

Stock-Sense – Market Analytics Dashboard — *React, JavaScript, REST APIs, Recharts, Tailwind CSS*

- Built a multi-page full-stack dashboard with live market data, client-side routing, and responsive UI — delivered end-to-end across the SDLC.
- Integrated REST APIs with error handling and rate-limit-aware delays; implemented caching to reduce redundant calls and optimise performance.
- Built a portfolio tracker with add/edit/delete positions and real-time gain/loss metrics.

Distributed Trading & Contact Tracing Systems — *Python, Docker, RabbitMQ*

- Developed message-driven distributed services with order queuing/matching and exposure tracking; containerised with Docker for repeatable deployment.
- Integrated team contributions and tested system behaviour end-to-end, supporting reliability and scalability.

Game World Database System — *MySQL, SQL, Relational Database Design*

- Designed a normalised relational database and wrote SQL scripts for schema creation, data population, and complex queries — JOINs, aggregations, ALTER TABLE, and bulk UPDATE operations.
- Enforced data integrity via primary/foreign key constraints and validated query outputs against expected results.

Banking Software Application — *C#, OOP, UML*

- Secure C# banking app with authentication, deposit/withdrawal logic, input validation, and UML use-case and activity diagrams for architecture modelling.
